Workflow
Digital X-ray with DragonflyPACS®

X-ray request issued from patient management system

Patient CD
Web server
Laser printer

Diagnosis
The X-ray is now available in the highest quality. An interface for communicating with the practice management system ensures that images and diagnoses are allocated to the corresponding patient data.

Converting to a digital image signal at DR system
The X-rays are directly converted to a digital image. The X-ray is available after a few seconds.

Reading the X-ray at CR system
The cassette is inserted into the film storage unit and read within seconds. The image is transferred to the network.

Patient journal entry incl. automatically documentation the X-ray procedure.
